# Data Integrity

- Historically, focus has been maintaining Support Centre data accuracy
  - Support promotions, national ranging program
- Future focus is to ensure integrity at every store, enabling:
  - Greater order accuracy
  - Advanced forecasting capability
  - Store-specific regional pricing

# Challenges

- GS1net resources leaving with no handover
- Data conflicts between GS1net and store/supplier information (pricing, status)
  - Stores notify Support Centre before GS1net is updated
  - Suppliers notify Support Centre without updating GS1net

# Next Steps

- Moving additional Top 100 suppliers through Ready-to-Live process
  - Award Concepts
  - Marley
  - AHM
- Full regional pricing support
- Integrating GS1net data into ordering and replenishment systems

# Store Order Processing

- Minimum Order Qty and Order Multiple will be respected when reorder quantities are generated
- Deleted items will be blocked from orders
  - GS1net Live suppliers only
- Support for cost breaks

# IT Development

- Middleware
  - Developed in-house
  - National Stockfile team to accept GS1net changes that are not category specific
  - Notification when data is waiting to be reviewed in Middleware
- Information Services
  - Packaging hierarchy support
  - Move to GTIN-centric stockfile

# GTIN-centric Master Data

- Currently SKU-centric
- Move to single unique identifier (GTIN) for every item
- Future developments will enable linking multiple GTINs to one “group code”, eg. plants, colour/size variants
- Packaging hierarchy will be fully supported
