Global Location Number - use cases

	GLN Type	Use case
Location type	Mobile Physical Location 	Allows you to identify physical locations that are not fixed to one place, for example, Courier vehicles, Public transport, Rideshare etc.
Activate Grade Attributes	Role Type 	Easily identify a location based on what happens there, for example, the packing facility on a farm would have the role type “Packer”.
	Collaborative ID(s) 	Include another identification number to you location, for example, a KPIN, Fonterra number or IRD number.
	Contained in place 	Allows you to group multiple physical locations in the same place together, for example, individual paddocks identified on a farm can be grouped under an overarching “farm” location.
	Related Organisation 	Identify organisations connected to this location through partnerships, shared goals, industry networks etc. This includes affiliates, collaborators and similar entities. As an example, identify suppliers of products to your stores using their location number.
	Location 	Allows you to connect Functional location types within your business, for example, your finance team is split over two locations, each is identified by a location number and linked through the Associate location field.
	Geo Coordinates 	Geo Coordinates to provide an additional layer of precision and a universal identification for your physical location.
	Geoshape 	Geoshapes help you define specific geographic areas such as paddock boundaries, port moorings and geographic zones.
	Digital Address 	A digital address allows you to include a reference point for where your digital location can be accessed such as a URL.
	Base Location 	Allows you to identify a place where your Mobile Physical locations are based, for example, the depot trucks operate from.
	Website 	Allows you to include a website URL against each of your locations.
